ChartLogic offers powerful medical practice management tool to physicians

Roswell, New Mexico - August 27, 2007 - A Roswell orthopaedic clinic's three-year-search for the right voice-technology-based EMR has resulted in the purchase of ChartLogic [Electronic Medical Records](#) (EMR).

Sportsmedicine Clinic Orthopedics and Reconstruction PC (SCOR) physicians were concerned over the cumbersome and inaccurate voice-recognition models they had viewed in previous searches, according to practice administrator Dorothy Hellums.

"When we saw ChartLogic's [medical voice-recognition software](#) and amazing accuracy the first time our doctors tried it for themselves in the initial sales demonstration—we were totally sold," Hellums said. ChartLogic's voice-recognition accuracy jumps to an industry record rate of 99.8 percent after initial voice training with a physician user.

Other compelling ChartLogic EMR features include comprehensive orthopaedic templates that are easy to generate and modify by the clinic; the most robust implementation and training program of all the EMR products that SCOR researched; and the off-site redundant server for data storage and disaster recovery.

ChartLogic's technical support process is one of the best in the business, according to Don Donigan, a consultant working with SCOR. Donigan, who specializes in medical information systems and networking, has clients across the country.

Donigan applauds ChartLogic's philosophy of sharing information. "In the EMR business it is typical for companies to keep secrets, such as knowledge about the database structure and how certain features of their systems work," Donigan said. "ChartLogic has the right attitude—they tell us everything we need to know to own the EMR. This makes processes like remote data replication and integration with other products a lot simpler."

SCOR was established in 1987 by orthopaedist James A. Boss, MD. Today, it is a three-physician, one-physician-assistant practice that caters to all orthopaedic conditions.

The practice has realized immediate benefits since implementing ChartLogic, such as speedy and complete referral and reply letters: which is how SCOR learned about ChartLogic initially, Hellums explained. "We worked with a practice that used ChartLogic EMR and one of the their doctors was sending reports back to us so quickly we asked them what EMR system allowed them such an excellent response."

ChartLogic is driven by state-of-the-art [medical voice recognition](#) technology that is continually refined by its voice experts. Using the power of Precision Voice, ChartLogic [electronic medical record software](#) enables physicians to quickly and accurately complete patient notes, navigate through the system through voice commands that know each doctor's personal voice, and use orthopaedic-specific vocabulary.

About ChartLogic

Based in Salt Lake City, Utah, ChartLogic, Inc. (CLI) is a Healthcare Information Technology (HIT) company focused specifically on the physician practice. With its advanced technology, it is a clear leader in the Electronic Medical Records (EMR) market with over 2,000 physician licenses and 6,000 total users.

CLI has evolved beyond being “best in breed” in EMR and now provides a fully integrated, total office solution for physician practices that enables the physician practice to achieve significantly higher levels of patient care, efficiency and profitability. This total solution provides physicians with an answer to their increasing economic pressures (higher costs and lower reimbursements) and allows them to be able to return to their primary interest – the practice of medicine.
